## Implement an Integrated Approach to ESG Management

Implement ESG processes and embed the management of ESG criteria within the core activities related to strategy execution and the organization's daily operations. ESG processes require collecting and analyzing complex and sometimes extensive data sets, which can be difficult and time-consuming without an effective information system. With the AdaptiveGRC ESG tool, data collection, generation of ESG metric values, working with these metrics, aggregating information, and approving and finally reporting it within the system becomes much easier.

Most popular features

ESG Data and Metrics Reporting

Due to the introduction of new regulations, companies are required to publish annual reports disclosing the results of their sustainability efforts. AdaptiveGRC ESG effectively supports companies in this regard.

Reconciliation of All ESG Disclosures

In the AdaptiveGRC system, we engage multiple business owners and support collaboration on aligning the value of indicators and data provided for formal ESG reporting within the organization.

Approval of Metrics for ESG Reporting

The system provides multi-level approval and, in the end, sends the finalized document with approved ESG data and indicators, which are components of the final annual report.

Performing Carbon Footprint Calculations

Thanks to the integration of Forward Earth with the AdaptiveGRC system, you can monitor and calculate your carbon footprint, ultimately generating carbon footprint results for Scope 1, 2, and 3.

Report in XBRL File Format

The culmination of the ESG process is the automatic transfer of data to the final version of the consolidated ESG report, including the required structured electronic data format (XBRL).
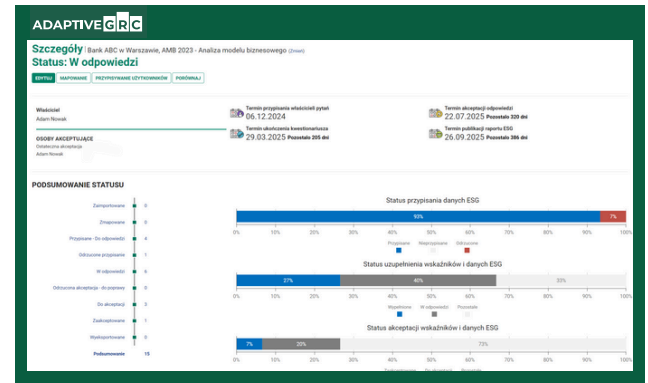

Ensuring Auditability

The data collection method in the system allows you to track who prepared and updated the reporting information and when, ensuring full accountability and auditability of the publicly published data.

Streamline your annual ESG reporting and ensure process transparency.

The tool supports the annual ESG reporting process by assigning individuals responsible for specific areas, facilitating collaborative work on data alignment and indicator values, implementing a multi-level internal approval stage, and ultimately sending or sharing the finalized report with approved data in XBRL format.

AdaptiveGRC ESG ensures transparency, accountability, and auditability in determining values for public reports.

Stay up-to-date with current and historical ESG indicator data.

The CSRD (ESRS) introduces highly stringent reporting requirements. Therefore, it is crucial to implement a tool like AdaptiveGRC to support the organization in sustainability reporting. By deploying AdaptiveGRC, a company can demonstrate the impact of its ESG efforts through quantitative and qualitative data.

Automate and simplify the carbon footprint calculation process.

You can generate carbon footprint data with the new environmental module powered by Forward Earth within the AdaptiveGRC system. Thanks to the intuitive interface and the support provided through knowledge base documents and instructional videos, it's easy to start using the tool even without prior experience in carbon emission assessment.
