ADAPTIVE GRC

Having Enterprise Risk Management (ERM) Software in place offers several advantages over Excel when it comes to effective management. Here are some key functionalities that differentiate professional solutions from spreadsheets:

Collaboration Between Departments

ERM facilitates collaboration among team members and departments, allowing for assigning responsibilities, setting deadlines, and tracking progress on risk mitigation actions.

Automated Workflows

ERM reduces multiple manual tasks, human errors, and saves you time. It automates risk scoring, applying preventive actions, and generating reports.

Standardized Risk Frameworks

Our predefined methodology and workflows based on ISO 31000 provide a structured risk management approach, ensuring consistency and adherence to best practices.

Scale and Flexibility

Risk management requirements become more complex as an organization grows. With AdaptiveGRC, you can accommodate additional risks, work on multiple projects, and cover other aspects of GRC.

Historical Data, Audit Trail

Our solution accumulates historical data and an audit trail of risk-related activities, including all occurred changes. This tool assists in identifying risk patterns, errors, and trends while improving potential due diligence.

Centralized Data Management

AdaptiveGRC provides a centralized platform to store and manage all risk-related data. It allows for a consolidated and easily accessible repository of all information and eliminates the risk of losing valuable data.
